Atlas Figure 2 | Longitudinal expression trajectories of 1,013 genes nominally coupled to cognitive severity only. Mean change from baseline ($\Delta\log_2(\mathrm{CPM} + 1)$) for PD (red solid, n = 249) and controls (blue dashed, n = 104) at baseline, 12 and 24 months. Shaded bands, ± s.e.m.; green dotted line, model-estimated log2FC(PD/Control). One panel per gene. Genes were selected at nominal $P < 0.05$ for MoCA but not MDS-UPDRS Part III.
