Atlas Figure 5 | Expression versus MDS-UPDRS Part III score for 612 genes nominally coupled to motor severity.
Covariate-corrected expression (x-axis, log2CPM) versus z-standardized MDS-UPDRS Part III score (y-axis); points are observed visits (745 PD, 312 control samples). Red and blue lines are descriptive OLS fits for PD and controls, not mixed-model estimates. Each panel annotates the interaction β and nominal P value. One panel per gene, ordered by ascending P value. Genes were selected at nominal $P < 0.05$ for MDS-UPDRS Part III.
